Choose from one of FMT's standard lines, modify one of those units, or work with FMT on a custom engineered design to meet your parts cleaning needs.

- Rotary Drum Systems are best suited for high-volume production, and continuous in-line cleaning of small parts.
- Some examples of parts cleaned using the FMT Rotary Drum include fasteners, stampings, fittings, and chain links.
- Available in single-stage or multi-stage configuration to suit virtually any type of cleaning application.
- Cleaning applications include washing, rinsing, phosphating, rust-inhibiting, and drying.
- Drum systems can accommodate a wide variety of part sizes and geometries using a perforated drum designed to process the necessary solution to clean, rinse, and dry the parts.
- Typical Rotary Drum sizes range from 12" to 72" in diameter, with custom sizes available.
- Rotary Drum washers can also include dual drums for part segregation, and can incorporate immersion and spray systems.
- Parts can be loaded manually or you can choose to incorporate an automatic load and unload system.
- Systems can be equipped with all popular heating systems including electric, steam, and natural gas heating.
