

Rotary Table Washers

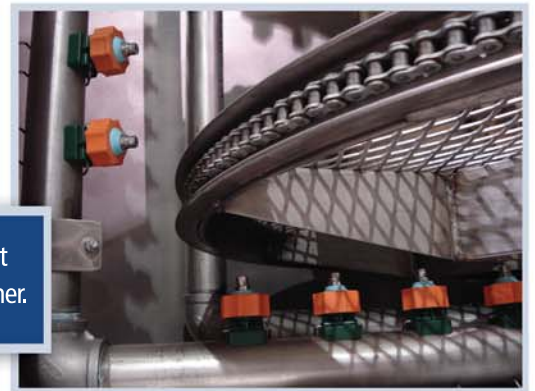

FMT, Inc. Rotary Table Washers provide effective part cleaning and drying, and are customizable to fit your production-specific needs.

Choose from one of FMT's standard lines, modify one of those units, or work with FMT on a custom engineered design to meet your parts cleaning needs.

- Rotary Table Systems are best suited for low volume parts production, batch cleaning, processing multiple part sizes and geometries, and for large, heavy parts.
- Some examples of parts cleaned using the FMT Rotary Table include remanufacturing cores, machined parts, fuel system components, and hydraulic pump housings.
- Single or multiple stages are available, including washing, rinsing, rust-inhibiting, and drying.
- Parts can be loaded manually or automatically; directly onto the table or by using custom fixtures.
- Standard FMT rotary table washers typically range from 36" to 72" in diameter. Custom units are available for any size.
- Systems can be equipped with all popular heating systems including electric, steam, and natural gas heating.
